

MODERN TECHNOLOGY CAN LOOK THIS GOOD

Accessories and add-ons for the AirWave1 and AirWave2

With original accessories from FLOETER, your AirWave machine becomes even more valuable. The long lasting and carefully thoughtout modular accessories allow you to transform your air cushion machine into an automated production line for outstanding packaging. With the ergonomic additions, you can increase your productivity and increase satisfaction at the packing station.

AirWave overhead solution

FOR AUTOMATION OF PRODUCTION

Place the air cushions at an ideal height for grabbing while also creating more space and freedom at the packing station. With Bluetooth control, sensors and lifting column. Perfect ergonomic coordination.

Rolling container

WITH FULL SENSORS

The rolling container is mobile and always brings your air cushions to the ergonomically correct working height. They can be simply picked up rather than continually bending over.

Docking station

FOR DISTRIBUTED USE

Here is where your AirWave shows what it can do. No volume is too large for a fast filling. The rolling containers are filled one after another thanks to the fast operation and are immediately available and mobile.

Mobile table solution

WITH AND WITHOUT TELESCOPING LIFT

Bring your machine to the ideal working height. This allows you to produce with intermediate storage to buffer and prevent bottlenecks at peak times. The docking station also works well with this.

The large roll coiler

FOR PRODUCING ENDLESS MATS

Ideal in combination with the roll trough, the coiler allows the production of endless rolled sheets of the cushion mats of series 8.x at an ideal height for grabbing.

Roll trough

FOR EASY STORAGE

If you are considering the coiler solution, you should take a closer look at the roll trough. It will keep your mat rolls free of dust and prevents them from unrolling accidentally. It can also be installed overhead at the packing station.

Jumbo roll holder

FOR LARGE DEMANDS

Up to 2000 meters on a single roll? No problem with the jumbo roll holder. Produce large quantities of air cushions with few roll changes. Ideal for all container and overhead solutions.

Foot pedal

HANDS-FREE IN THE PACKING SHOP

If the machine is located in a location that is difficult to access or you simply don't have a hand free, the foot pedal is a valuable solution.
